Sample Life Plan

Every pet is one of a kind, a unique individual with its own personality and characteristics. Each pet also has individual requirements and a unique predisposition to genetically-linked diseases.

Orivet’s proprietary algorithm uses genetics, signalment data (breed, age, weight and sex) along with geographic and lifestyle factors to identify each pet’s specific traits and risks. Orivet’s Life Plan is an innovative tool that helps pet owners, together with their veterinarian(s), prevent, diagnose and treat some of these conditions earlier and more effectively than ever before, saving precious time and money. The Life Plan also incorporates all routine care aspects of the pet’s healthcare management to deliver a complete solution for optimizing outcomes.

The list below was generated by our proprietary algorithm. It takes into account Banjo's breed makeup, age, weight, sex, and other lifestyle factors. The scores rank disease importance based on incidence and severity.

Please note, it does not mean Banjo will ever actually contract any of these diseases. It only represents an increased RISK when comparing Banjo's genetic information to published scientific information available.

*Banjo* has an estimated adult weight of 39 kg and based on the breeds detected in his profile, we would recommend feeding a large breed puppy formula for the first 18 months of life, followed by an adult food formulation. You may adjust this further to suit the lifestyle, age and level of activity *Banjo* will be engaged in (see below).

**Large Breed Puppy Food**

Large and giant breed dogs take much longer to reach skeletal maturity, and also have relatively weaker bones compared to those of smaller breeds, as the bones are less dense and more prone to remodeling. They are also much heavier, and so put more load on their growing bones. Hence larger breeds are more susceptible to increased stress loads and to developing skeletal injuries or deformities. It is for these two reasons that large and giant breed puppies are fed a different puppy formula to smaller breed puppies. Large breed puppy foods balance energy and nutrient requirements to meet the slower growth curve of a large breed dog, allowing time for bones to develop and strengthen properly as the body grows to its full size. Always choose the correct puppy formula for your dog, and if unsure what the right puppy food is, check with your vet. We have provided a general guide for you below, based on the estimated size of your dog.
